1. **Aim/ Overview of the Project:** make a project in Adobe Photoshop by using different tools and techniques like layers, filters, text formatting etc.
2. **Task to be Done:** Create a magazine of 5-6 pages on Adobe Photoshop by using various tools and various effects.
3. **Steps Followed in Making the project:**

Page 1:

Step1: Take a image and apply it as Background by using the following steps:

- Open Photoshop and load an image.
- Convert the image to a layer (Layer > New Layer from Background).
- Resize the canvas to fit the background (Ctrl + Alt + C / Option + Command + C).
- Drag and drop an image as a background or create a new fill layer.Alternatively, you can create a new background by adding a solid colour layer or placing an embedded image below the original photo layer.

  Step 2: Add text on image.
- Select the Type tool (T) from the toolbar. You can choose the Horizontal Type tool or the Vertical Type tool from the context menu.
- Click on the image where you want to add text, or click and drag to create a text box or a shape for your text.
- Type your text and choose your font, font size, and colour from the menu at the top of the Photoshop workspace.
- Select the Move tool to adjust the position of your text. Press the ESC key or the checkmark in the upper bar to confirm your changes.

  Step3: Add effects to the text.
- Modify the text using the "Paragraph" and "Character" menus.
- Right-click the text and select Blending Options to apply effects.
- You can also find and add free new fonts online.

DISCOVER INDIA

Where The World Travels

In Picture:
The Famous
Ganga Ghat

Insider's Guide;
The Holy City Of
Varanasi

Page 2:

Step 1: Follow the previous steps as mentioned in previous page to create the image as background.

Step 2: For writing better in image first we will edit the image using different tools present in Photoshop.

- Go to toolbar menu and select the **Blur tool** (It blurs and softens areas you paint over with the tool) to make the image soft and blur so the text which need to be displayed on the image will be visible properly to the viewer.
- Now, use the **Sponge tool** (Paint over areas with the Sponge Tool to increase or decrease colour saturation.) to increase the saturation of the image so that the colours in the image seems to be more saturated and lively.
- After this we will use the **Dodge tool** (Paint over areas in the image with the Dodge Tool to lighten them.) in the areas where we have to write the text in the image as seen in the screenshot provided.

Step 3: Apply text to the image using the steps provided earlier in the previous page and give the effects which is also already discussed previously.

Step4: Change the opacity of the text based on your convenience, the option of opacity is given in the properties panel above the layer panel.

Kashi Vishwanath Temple

Rudra Abhishek
Amount: Rs 450
Timing:4;00AM to 6:00PM

Sugam Darshan:
Amount: Rs 300
Timing:6:00Am-6;00PM

Page3:

- Step 1: Follow the previous steps as mentioned in previous page to create the image as background.
- Step 2: Edit the image using different tools present in the toolbar menu to make the image more brighten and realistic using the tools like,

    Use the **Sharpen Tool** (The Sharpen Tool sharpens areas you paint over.) to make some points like the edge of the boat as present in the image more harp making it aa a eye catching part of the image.

    Use the **Burn tool** (The Burn Tool will darken the areas you paint over.) to show the effects of different colours and colour will appear more vibrant in the image.

    Use the **Healing tool** (it lets you repair larger problem areas in an image by painting over them. Hold Alt (Win) / Option (Mac) and click to sample good texture, then paint over the problem area to repair it.) to make the image error free without any sign of being copied from the internet.

- Step3: Add the required text to the image.
- Step 4: Make the required adjustments in the whole image by going to **Image** option< **Adjustments**< choose the option you want to adjust.

Assi Ghat

Timing: Open 24hour
Location: Ganga River

Page 4:

Step1: Follow the previous steps as mentioned in previous page to create the image as background.

Step2: Use the **Zoom Tool** (It is used to zoom the image for better experience of the user). To work properly as the image which is being downloaded appear comparatively small.

Step3: Use the **Patch tool** (With the Patch Tool, draw a freeform selection outline around a problem area. Then repair it by dragging the selection outline over an area of good texture.) to remove the unwanted objects present in the image like here in the image in the downside, there was unwanted red colour was present, so to remove it use the patch tool.

Step4: Use the **Clone Stamp Tool** (The Clone Stamp Tool is the most basic of Photoshop's retouching tools. It samples pixels from one area of the image and paints them over pixels in another area.) to match the healed portion with the colour of the other parts of the image.
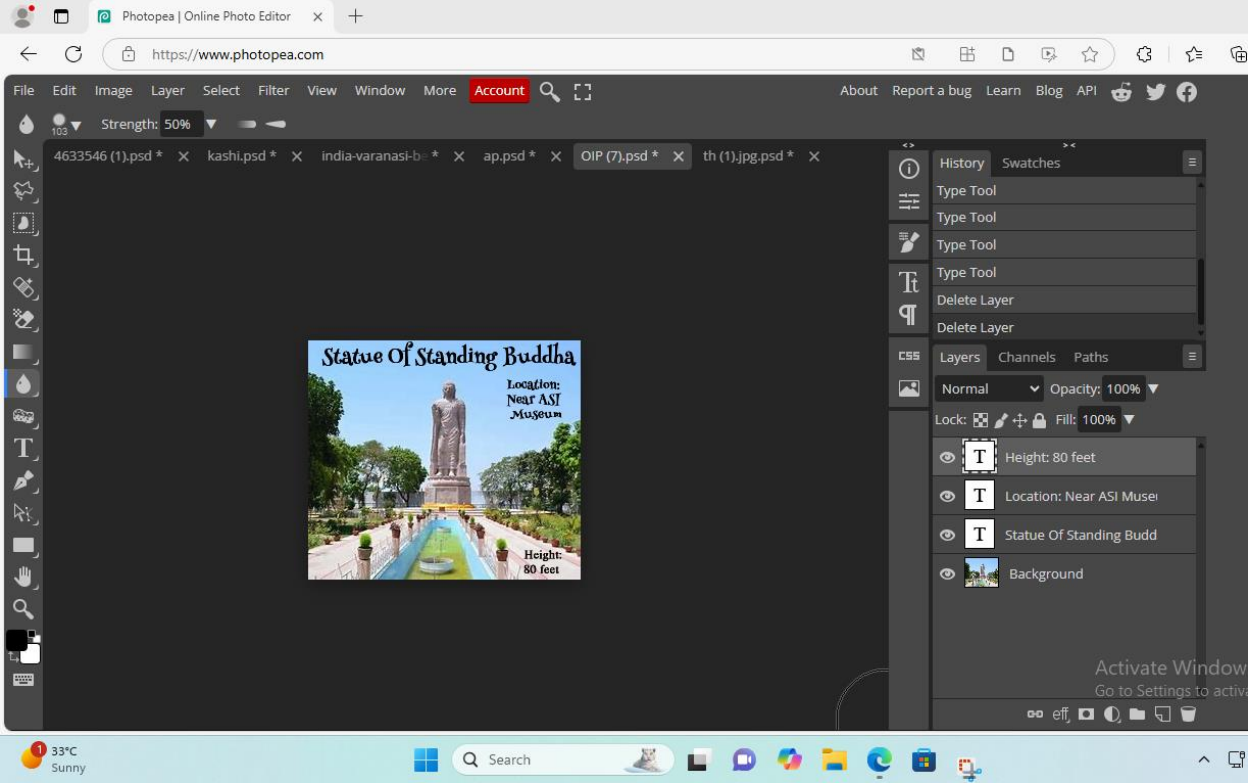

Step5: Use the **Blur Tool** to hide the unimportant part and make the text more appealing and visible.

Step6: Add the suitable text to the image.

Page 5:

- Step1: Follow the previous steps as mentioned in previous page to create the image as background.
- Step2: Use the **Sharpen Tool** (The Sharpen Tool sharpens areas you paint over.) on the area where the statue is shown of lord Buddha to make it more attracting in the image.
- Step3: Use the **Blur tool** to make other things as background and image of lord Buddha and text as foreground.
- Step4: Use different layers of text to make the editing of particular part easier and each part of text will have different format and different size.
- Step5: Use the **Move Tool** from the Photoshop tool menu to move different Parts of the layers of text in different areas of the image.
- Step6: add text to the image.
- Step7: Change the text formatting using the **Character Panel**. This can be accessed by going to Window > Character. Within this panel, you can control many formatting adjustments such as font, text size, kerning, leading, tracking, and other important alignment options.
- Step8: Adjust the opacity of the text such that the text is clearly visible to the viewer.

Statue Of Standing Buddha

Location: Near ASI Museum

Height: 80 feet

Learning Outcome:

1. **Design Principles**: Understanding layout, balance, contrast, and alignment to create visually appealing pages.
2. **Adobe Photoshop Skills**: Gaining proficiency in using Photoshop tools and features, such as layers, masks, text formatting, and image manipulation.
3. **Image Editing**: Learning how to edit and enhance photos, including colour correction, cropping, and applying filters.
4. **Typography**: Exploring font selection, text hierarchy, and readability to effectively communicate messages.
5. **Creativity**: Enhancing creative thinking and problem-solving skills by conceptualizing layouts and content.
6. **Feedback and Revision**: Learning to incorporate feedback and make revisions, which is essential in design work.
7. **Audience Awareness**: Understanding the target audience and designing content that appeals to their interests and needs.
8. **Presentation Skills**: Gaining experience in presenting and explaining design choices, either verbally or through documentation.

These outcomes can help build a strong foundation in both graphic design and practical software skills.
